

The diagram illustrates asynchronous replication between two database clusters. On the left, a light blue rounded rectangle represents the 'Source cluster'. Inside it, three overlapping white rectangles represent 'Percona XtraDB Cluster instances'. On the right, a similar light blue rounded rectangle represents the 'Replica cluster', also containing three overlapping white rectangles for 'Percona XtraDB Cluster instances'. A large blue arrow points from the source cluster to the replica cluster. Above this arrow, the text 'asynchronous replication' is written in blue. The bottom of each cluster box is a darker blue bar with the cluster's name: 'Source cluster' on the left and 'Replica cluster' on the right.
